HiQ Job Spec
C ++ DEVELOPER

Stockholm

WE ARE LOOKING FOR THIS

It has probably not gone unnoticed that more and more things are starting to get connected. At HiQ, we drive the development of the digital keys of the future and enable more and more people to control alarms, lighting and other functions in the home via the telephone.

In addition, we have our own overall commitments where we develop the autonomous vehicles of the future in our awesome premises with a view of the whole of central Stockholm.
With the help of embedded technology and IoT, HiQ has taken the lead in the journey of change to a more digital society.

As Sweden's most technology-heavy consulting company, we will of course continue to take on several groundbreaking projects and develop what is guaranteed to simplify things for people. We are therefore looking for experienced C ++ developers who, together with us, want to open up a whole new world of possibilities for a safer and more efficient tomorrow!

CHECKLIST FOR APPLICANTS

We do not have many requirements, but to fit into the role of C ++ developer with us, we believe that you have an engineering degree and worked with development in C ++ (11 or 14 or higher) for at least 5 years. You get an extra plus if you also have experience with Linux, Python, RTOS, cloud technologies and modern development methodology!

Does this sound like a role to you?

YOU GET THIS

To be a consultant is to constantly try something new and be exposed to new industries, workplaces and tech stacks. The variation is great and the pace of development is fast. Being a HiQ consultant also means a great deal of joy, security and (*really*) an unbeatable culture and atmosphere.

Joy is one of our values and it is with us in most things we do. For example, hanging out with each other at one of our type 150 annual events such as the music festival, board game evenings, family cinema or the course in Microservice Architecture. It has always been we HiQare ourselves who build the company - some of us get started at our epic conferences and AWs. Many people like the sharing of skills and

educational opportunities, while others value a fixed salary, parental salary and flexitime. So there is something for everyone here but we are far from finished.

HiQ is culture-driven, not rule-governed, and it allows you to be yourself 100%. A consequence of this is that you as HiQare take your job seriously, but not always themselves :)
